

Suraj Kumar Singh

+91 9582379576 — singh.suraj14112@gmail.com — [GitHub](#) — [LinkedIn](#) — [Portfolio](#)

TECHNICAL SKILLS

Languages: Java, JavaScript, Python

Backend: Spring Boot, Spring MVC, Spring Security, REST APIs, JWT

Databases: SQL, MongoDB

ORM & Persistence: JPA, Hibernate

Caching & Messaging: Redis, Kafka

Build & DevOps: Gradle, Docker, Maven

Testing & Tools: JUnit, Git, GitHub, Postman

Frontend: HTML, CSS, React, Tailwind CSS, Bootstrap

WORK EXPERIENCE

Software Engineer (Application Support Engineer)

CMS Info Systems (ICICI Bank), India

June 2025 - Present

- Engineered a centralized authentication system using **Java and Spring Boot**, implementing **JWT-based access control** to secure access across multiple banking applications handling high-volume transactions.
- Implemented QR code-based transaction features, reducing manual processing effort and improving workflow efficiency.
- Refactored backend logic, improving data processing efficiency and reducing query execution time by **20%**.
- Lowered API response latency by **25%** through optimization of REST endpoints and SQL/MySQL queries.
- Adopted **modular and layered architecture**, improving code maintainability and enabling easier feature extension.
- Strengthened system **scalability** by optimizing request handling to support increased concurrent users.
- Contributed to feature delivery in an agile environment, ensuring timely deployment of backend enhancements.

SELECTED PROJECTS

Healthcare Management System (Spring Boot) (GitHub)

- Architected a healthcare management system using **Java and Spring Boot** to handle patient records, doctor scheduling, and appointment workflows.
- Exposed **RESTful APIs** for core functionalities, leveraging **Spring Data JPA and Hibernate** for efficient data persistence.
- Integrated **JWT-based authentication and role-based access** for Admin, Doctor, and Patient modules.
- Structured the application with **layered architecture (Controller → Service → Repository)** to ensure maintainability and scalability.
- Optimized system throughput using **Redis caching**, reducing database load and improving response time.
- Applied **DTO design pattern and global exception handling** to standardize API responses and improve code quality.

Authenticate (Secure Authentication System - Full Stack) (GitHub)

- Strengthened a full-stack authentication system using **Spring Boot, Spring Security, and React**, supporting user registration and session management.
- Enabled **JWT-based authentication and authorization** for controlled access across application modules.
- Integrated **Java Mail API** for email verification and password recovery workflows.
- Applied **BCrypt hashing** to ensure strong credential protection and secure storage.
- Created responsive frontend components using **React, HTML, and CSS** for improved user interaction.

ACHIEVEMENTS

- Solved **100+ DSA problems** on platforms like LeetCode, focusing on arrays, recursion, and dynamic programming.
- Participated in a **college hackathon**, building real-world problem-solving skills and teamwork experience.
- Volunteered in **Data Structures sessions**, assisting peers in understanding core concepts and problem-solving approaches.

EDUCATION

K.R Mangalam University

Master of Computer Applications

Sohna, Haryana, India

August 2023 - June 2025

Bhim Rao Ambedkar Bihar University

Bachelor of Computer Applications

Muzaffarpur, Bihar, India

August 2019 - 2023
